The following is an examiner's statement of reasons for allowance: Nease et al. (US 5580411, figure 8) is the closest art of record and teaches a member extending in the longitudinal and lateral direction and further being asymmetric with respect to the lateral centerline and symmetric with respect to the longitudinal centerline and fails to show any placement of fastening material on the intermediate stock material of figure 8 prior to the division of each piece into two pieces. There is no suggestion to modify an extending portion of the member of Nease et al. so that there would be "said shaped tab comprising a fastening material" (claim 1, line 17) in combination with "the shaped tab has a longitudinal centerline, a lateral centerline, a distal portion and a proximal portion, the shaped tab has a contour edge comprising a shaped upper edge and a shaped lower edge and a longitudinal length between the shaped upper edge and the shaped lower edge that differs from the longitudinal length of the base panel, the shaped upper edge and the shaped lower edge are symmetric with respect to the longitudinal centerline of the shaped tab when relatively shifted in the longitudinal direction and are symmetric with respect to the lateral centerline of the fastening member" (claim 1, lines 9-17). Such claimed combination structure provides benefits and differences unobvious over the structure of Nease et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
